

Since hundreds and hundreds of researchers, doctors, professors, scientists from all over the world are working day and night, 24/7 to solve this pandemic and most of the institutes that deal with this sector are without funds because nations always think of other things and research is always one of the last things governments think of, the CoVAX20 team, together with the good world of CRYPTOs, will donate 50% of the proceeds from the tokens sold, helping them directly, without passing for all bureaucracy offices, we will contact the head of the institute or the heads of the institutes that carry out research and thanks to our votes they will have been awarded the right to payment and we will directly pay the sums in charge (through opening the crypto wallet, so we are transparent) and why not, based on how the whole project will develop, we hope to be able to build a structure suitable for the hospitalization and study of and for these situations that are upsetting the the lives of everyone around the world, we want certain events to no longer occur and if, if they become apparent, we must be ready to stop the problem from the beginning.

We do not speculate on deaths, but we try to help the living people to live a peaceful life, by helping research.

The CoVAXcoin token (CoVAX20) wants to demonstrate that good will win over evil and the vaccine will come soon and that, if the risk of infection hypothesized for the CoronaVirus (COVID19) could hit about 60% of the world population, the CoVax team have created 4.500.000.000 token (source: <http://popolazione.population.city/world/>) which are equivalent to this 60% and for each person who heals, we will burn 1 token.

The tokens are ERC20 on blockchainEthereum and therefore it is not possible to increase the number. We hope to burn as much as possible, both because in this way the value of the token increases and, above all, it will mean that people heal and get back to health.

We invite everyone to buy these tokens quickly because as we say we hope to burn them as much as possible and, since it is not possible to increase their number, they will soon end, how will end this pathology / pandemic that is frightening the world.

Also because people, how we see these days, recover (source:

<https://gisanddata.maps.arcgis.com/apps/opsdashboard/index.html#/bda7594740fd40299423467b48e9ecf6>) and each day that passes is an extra day on which research has been done on the vaccine and we are on the front line

because, remember, we will give as much as 50% of the proceeds to universities, research centers, hospital sections (obviously with the right requirements) that do research on viruses and lethal infectious diseases for humans and we will distribute them once every 3 months with a vote which will be done via smartcontract on blockchain, when everything is up and running, now, immediately after the release of the CoVax20 token on the ethereum blockchain and since it will be listed, as soon as we get to the first 100

ethers, we will immediately make a vote and everything will be updated on social media. It will be us, holders of the CoVAX20 token, with our votes to elect the most deserving structure or structures or what will be done with our money.

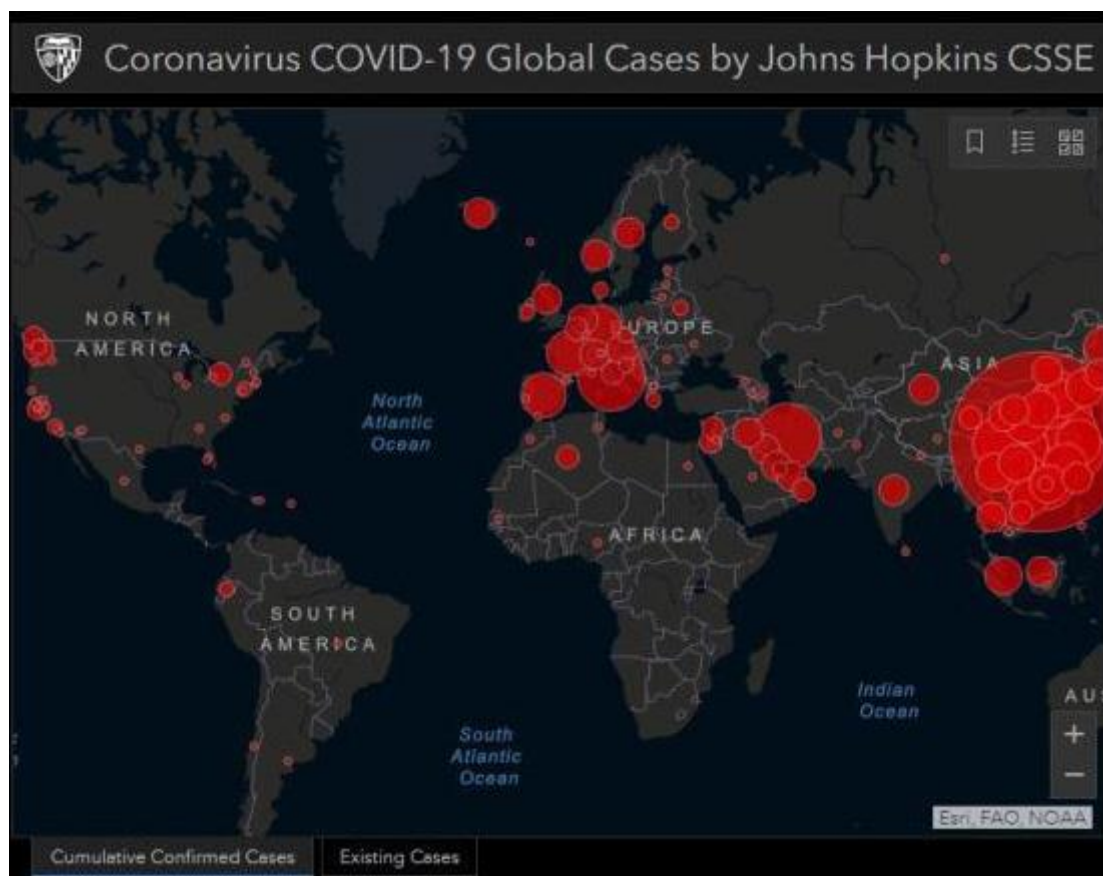

Crypto democracy that goes on!

We are working to make the token a little more tempting for investors, if ever it were needed, creating a smartcontract to bet which nation in the world will be the first to discover the vaccine.

Once we find this vaccine, we hope to continue helping universities, research centers and hospital sections around the world to ensure that the risks of future pandemics can be avoided.

Come on CryptoNerd, come on guys, we have a nice message to send to the world!

Cryptocurrencies are a good thing and they do good things!

## TOKEN USE:

The sale of CoVAXcoin (CoVAX20) will be distributed as follows: 90% will be available for buying by investors and 10% will remain with the CoVAX20 team

## the profits from the sale will be distributed as follows:

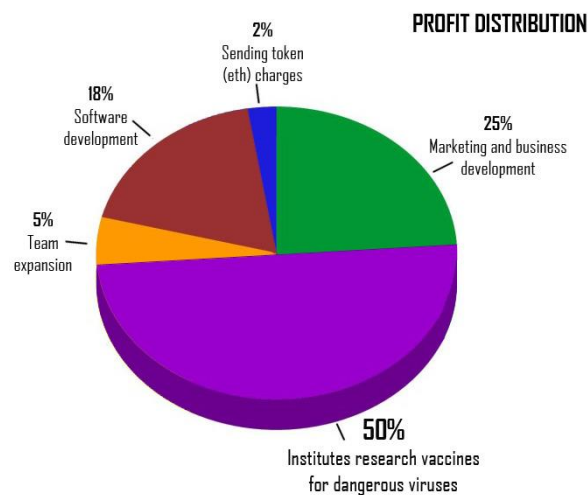

50% donation to research institutes for vaccines for viruses and infectious diseases

25% to marketing and advertising then data collection and project promotion in various forms

18% for software development and smart contract CoVAX20

5% to hire and enhance the figures within the team

2% will be used for Ethereum blockchain fees and for the first quotes in the exchanges

## use of Team token:

60% use by founders, teams and developers as payment

25% intended for the maintenance of the project community and for any partnerships with other groups and / or communities

15% team reserve for a period of 2 years

# Why you should buy CoVAX20:

Cryptocurrencies are a form of digital money, which make you able to make online transactions without any financial intermediary.

We are used to think to money like something emitted by a Central Bank, and introduced into the economical circuit via intermediaries.

Cryptocurrencies go beyond that idea of money: everyone can create a cryptocurrency and use that to pay items and services, to the ones who accept that certain cryptocurrency as a payment method, so there is no centralized power.

A cryptocurrency is just a series of data, organized in “blocks” that generate the cryptocurrency.

Everyone heard about BitCoin, the first cryptocurrency to be created, in 2009, by Satoshi Nakamoto.

The fact that doesn't exist any central power emitting cryptocurrency brings three advantages:

- 1) Cryptocurrencies, are not object of inflation because they usually have a max supply. The transactions are almost totally anonymous.
- 2) Cryptocurrencies' existence is based on the thrust between the operators.
- 3) The exchange and trade of cryptocurrencies provides executive freedom.
- 4) Those are the five most important features of the transactions with cryptocurrencies:

## 1. Irreversible transaction:

after being confirmed, no transaction can be cancelled.

## 2. Anonymity:

there is no way to find out the real identity of the operators, they will only be identified as their wallets' IDs.

## 3. Fast and global:

transactions will happen almost immediately and can be confirmed in just some minutes. It is possible to send cryptocurrencies wherever in the world.

## 4. Safety:

cryptocurrencies are locked into a system of cryptography with public key. Only the owner of the key can send cryptocurrencies.

CoVAX20 is safer than a Swiss Bank!

## 5. Freedom:

you don't need any permission to use them! You just need a wallet (FREE), then you will be able to send a cryptocurrencies to whoever you want.

## Final conclusions

The launch and sale campaign for this new CoVaxCoin project in support of the urgent search for this Covid19 vaccine will take place through the passage of messages, explanations, updates, developments and info on all the major social networks such as Facebook, Twitter, Instagram several times a day. , via Telegram groups and channels, BitCoinTalk ad, Reddit, Discord.

The CoVaxCoin (CoVax20) tokens generated are 4,500,000,000 cannot be increased and are equal to 60% of the population of the earth (which was assumed to be the maximum number of infected individuals) on March 1, 2020.

For each person who will heal, through website verification:

<https://gisanddata.maps.arcgis.com/apps/opsdashboard/index.html#/bda7594740fd40299423467b48e9ecf6>,

we will burn a token, this verification with consequent token elimination action will take place once every 24 hours (12:00 UTC).
